VISIT SUMMARY · PRIVATE TRAINING RECORD

Randy-SIM preventive visit

A de-identified demonstration of VirtuaPet intake, visit documentation, sandbox payment, and follow-up.

PATIENT	VISIT	STATUS
Randy-SIM Adult neutered male · mixed-breed dog	Routine preventive wellness September 21, 2026	FINAL 29.9 kg recorded

Services documented

SERVICE RECORDED	ROUTE / SITE
Wellness examination	Routine preventive visit
DAPPV vaccination	Right shoulder
Rabies vaccination	Right hip
Leptospirosis vaccination	Left hip
Bordetella vaccination	Intranasal
Oral-care counseling	Education recorded
Weight-management counseling	Education recorded

Instructions and clinical boundary

Monitor after vaccination. Follow the clinic's simulation protocol for post-vaccine observation. Continue the recorded oral-care and weight-management plan. The source document did not provide a complete structured examination, diagnosis, prescription, laboratory result, or treatment plan, so none has been added here. This document cannot be used to make clinical decisions.

This summary preserves only the de-identified clinical pattern supplied by the owner. Real names, contacts, identifiers, clinic and clinician details, and signatures are excluded.

PAYMENT & FOLLOW-UP · VERIFIED SIMULATION

Receipt and next step

The payment was processed in Stripe test mode. No real money moved.

FICTIONAL INVOICE	SIM-RANDY-20260921	PAID
Wellness examination		$85.00
Preventive vaccination package		$80.00
Oral and weight counseling		$20.00
TOTAL · USD		**$185.00**

Payment evidence

Stripe mode: Test Payment status: Succeeded
PaymentIntent: pi_3UHVJv6eXBPeFPqN0w6QgEzY
Charge: ch_3UHVJv6eXBPeFPqN043V3flg

The source visit summary contained no invoice. The line items and $185.00 total are explicit simulation assumptions.

Follow-up

FOLLOW-UP DUE	October 19, 2026 · 9:00 AM MDT
PURPOSE	28-day preventive follow-up / booster recall
MESSAGE	A labeled simulation message record was created. No application email was sent.

What this record proves

Workflow evidence: isolated intake, scoped consent, appointment-linked visit draft, veterinarian-role finalization, test-mode charge verification, recall creation, and a labeled follow-up message record. This proves the controlled simulation path; it does not establish clinical validation, regulatory approval, real email delivery, or a real patient encounter.

Keep this record within the private MyPets Denver simulation. For any real animal-health concern, contact a licensed veterinarian or emergency clinic.
