

A clearer clinical workspace

The refreshed dashboard puts organization access, today’s work, clinic opening steps, and product maturity in one place. The Denver clinic remains a private simulation with no real patient activity.

WHAT CHANGED	WHAT STAYED SAFE
• New warm clinical layout Faster scanning across desktop and mobile. • Denver clinic is easy to find The simulation appears first in the organization selector. • Release states are visible Pilot, prototype, validation, and discovery labels remain attached to each capability.	• Existing Entra sign-in Your authorized account still controls access. • Organization isolation Use only the organization assigned to your account. • Honest imaging boundaries DICOM is an engineering pipeline. It does not diagnose, triage, or recommend treatment.

USE THE UPDATED DASHBOARD

1 Sign in Use your invited Microsoft Entra account.	2 Select your organization Choose MyPets Denver for the private clinic simulation.	3 Verify access The dashboard checks your active organization membership.	4 Follow the checklist Accept invitations before adding fictional pets or rehearsing visits.
---	--	---	--

SIMULATION RULE

Use fictional animals and synthetic or fully de-identified imaging only. Do not use this environment for urgent care, diagnosis, prescriptions, surgery, or real payments. A licensed veterinarian remains responsible for every clinical decision.

Need help? Open “What changed” from the dashboard at any time. Access problems should be reported with the account used, selected organization, time, and visible error — never include passwords or tokens.
